

anilides

1. Compounds derived from *oxoacids* $R_kE(=O)_l(OH)_m$ ($l \neq 0$) by replacing an OH group by the NPh group or derivative formed by ring substitution; *N*-phenyl amides, e.g. $CH_3C(=O)NPh$ acetanilide.

See *amides*.

2. Salts formed by replacement of a nitrogen-bound hydrogen of aniline by a metal or other cation, e.g. $NaNHPh$ sodium anilide.
